3. How the Redesign Solves Real Dribbble Shortcomings

The feedback validates that the redesign successfully targets and eliminates major UX pain points present in the live version of Dribbble:

1. Clear Purpose vs. Cluttered Hero

Real Dribbble Gap: Confusing hero section with aggressive sign-up walls.
Redesign Solution: Clear heading and search bar give instant clarity to first-time visitors (Users 1 & 2).

2. Transparent Pricing vs. Paywall Ambiguity

Real Dribbble Gap: Obscured Pro pricing and sudden paywalls.
Redesign Solution: Dedicated side-by-side pricing cards clearly present Free vs. Paid options upfront (User 4).

3. Client Sourcing vs. Hidden Hire Paths

Real Dribbble Gap: Hiring features are buried behind navigation layers.
Redesign Solution: "Why Companies Choose Dribbble" and talent cards explicitly guide hiring managers (User 3).

4. Education Hub vs. Isolated Ads

Real Dribbble Gap: Workshops feel like intrusive banner ads.
Redesign Solution: Structured course cards (UI/UX & Branding) naturally integrate into career pathways (User 5).

4. Detailed Analysis of User Expectations

Key Insight: Transitioning from Visual Discovery to Direct Action
Users praise the visual layout and structure, but expressed a strong desire for seamless transition into action—such as filtering specific tags, comparing plan features line-by-line, contacting designers immediately, or viewing course schedules directly from the homepage.

Analyzing the user comments reveals three specific user journeys that your redesign successfully created:

- **Inspiration & Discovery Journey (Users 1 & 2):** Visual cards and prominent search provide an engaging entry point. Adding persistent search filter chips will make this journey even faster.
- **Hiring & Evaluation Journey (Users 3 & 4):** Social proof, stats, and side-by-side pricing cards validate platform credibility. Adding direct "Hire" buttons will complete this funnel.
- **Learning & Upskilling Journey (User 5):** Career growth cards successfully capture interest. Displaying duration and registration dates directly on the cards will drive immediate course enrollments.

5. Actionable Design Recommendations

To refine the website from a highly rated prototype into a fully optimized production product, the following prioritized enhancements should be implemented based on user feedback:

Recommended Enhancement Roadmap

Priority	Target Module	Action Required	Expected UX Benefit
HIGH	Pricing Cards	Add a side-by-side feature comparison list with bold checkmarks for Paid tier perks.	Eliminates hesitation for User 4 & boosts conversion.
HIGH	Course Cards	Display duration (e.g., "4 Weeks"), format ("Live + Self-Paced"), and next start date.	Provides immediate answers for User 5 without extra clicks.
MEDIUM	Project Cards	Add hover actions with a clear "Hire Designer" or "Contact" button on each card.	Streamlines the client workflow requested by User 3.
LOW	Header & Search	Include quick-filter pills (e.g., #MobileApp, #Branding, #Illustration) under the search bar.	Enhances rapid discovery for User 2.

6. Final Conclusion

The feedback from all 5 test participants demonstrates that your website redesign is a clear success. It successfully fixes the primary usability problems associated with the original Dribbble platform by offering:

- An unambiguous, welcoming hero section that communicates purpose instantly.
- Clean, image-first project cards that prioritize creative visual work.
- Transparent, accessible pricing structures without hidden barriers.
- Dedicated spaces for talent acquisition and professional skill development.
